

Instructions

1. This scale measuring magnifier can be equipped with different measuring scale plates, which can measure distance, angle, roundness, metric thread, etc. It is mainly used for mechanical processing measurement, PCB screen measurement, circuit design measurement, textile processing measurement, etc.
2. The scale magnifier has large caliber, wide angle, high imaging definition and high measurement accuracy.
3. The scale and the object to be measured can be seen clearly by rotating the focusing eyepiece.
4. The scale magnifier is equipped with lithium-ion polymer rechargeable battery, which can be used for about 2 hours after charging.

Type-C
